Northeast-Midwest Report

NORTHEAST MIDWEST INSTITUTE

THE CENTER FOR REGIONAL POLICY

The Northeast-Midwest Institute was formed in 1977 at the request of representatives and senators who wanted to ensure the future economic vitality of those states that historically have formed the nation's industrial heartland. The Institute works closely with the Northeast-Midwest Congressional Coalition, a bipartisan group of nearly 200 representatives, and with the 36 senators who comprise the Northeast-Midwest Senate Coalition. In addition to elected officials, the Institute provides information and analysis to corporate, academic, and labor leaders who recognize the common problems facing their states and the fact that federal policies often create obstacles to regional economic growth. Institute staff work in five major issue areas: economic development, human resources, energy, natural resources, and trade.

Overview

The federal government spends some $160 billion annually for goods and services, including health insurance, research equipment, toiletries and tanks. The Northeast-Midwest region receives scant few of these prime procurement contracts.

In 1989, northeastern and midwestern states -- which account for 42.3 percent of the nation's population and pay 47.5 percent of the federal tax burden -- received only 35.1 percent (or $54.5 billion) of this procurement pool. If the region's share of federal procurement had equaled its share of the nation's tax burden, it would have received $19.3 billion more in federal spending. Put another way, the Northeast-Midwest region's return on dollar for federal procurement equalled only $0.74, compared to $1.02 for the South and $1.47 for the West.

California obtained the most federal procurement in 1989, with $28.9 billion of prime contracts. The District of Columbia received the largest per-capita benefit at $3,768, almost twice that of the second ranked state of Connecticut. Measured according to return on dollar, New Mexico was the winner with $4.59.

On the other end of the spectrum, South Dakota and Wyoming received the least amount of total procurement prime contracts, with $320 million and $109 million, respectively. On a per-capita basis, Michigan and Oregon ranked at the bottom, with $155 and $116 respectively. Michigan and Oregon also had the lowest return-on-dollar rankings, with $0.24 and $0.21 respectively.

Of the Northeast-Midwest region's 18 states, only Connecticut, Massachusetts, Maryland and Ohio obtained returns on dollar above $1.00. Connecticut, at $1.94, and Massachusetts, at $1.91, received large prime contracts from the Department of Defense. Maryland ($1.57) benefitted particularly from the Department of Health and Human Services' contracts to the National Institute of Health and the National Aeronautics and Space Administration's contracts to the Goddard Space Flight Center. Ohio ($1.02) received a relatively high percentage of prime contracts from the Department of Energy for its Fernald and Mound facilities.

Washington's bias against northeastern and midwestern businesses is true for both military and civilian procurement. Of the major federal agencies contracting for goods and services, none supplied the Northeast-Midwest region with a level of prime contracts equaling its share of population or tax burden. The Department of Defense, the largest purchaser with $118.7 billion, delivered only $45.4 billion of prime contracts (38.2 percent) to northeastern and midwestern states, and the bulk of those went to Connecticut and Massachusetts. The National Aeronautics and Space Administration, the agency that the Bush administration has singled out for large budget increases, sends only 15.3 percent of its prime contracts to the Northeast-Midwest region.

The Northeast-Midwest Institute has previously illustrated the long-standing pattern of federal disinvestment in the region. Of the four major categories of federal spending -- grants to state and local governments, direct payments to individuals, salaries and wages, and procurement -- the Institute has recommended particular attention be paid to grants, in which the region receives a reasonable return, and federal procurement, in which the region does poorly. Past publications have focused on grants, especially on their shrinking size and the impact of decennial census data on allocation formulas. This report concentrates on federal procurement, which accounts for almost 20 percent of the total budget, making it the second largest category of federal spending, behind only Social Security, Medicare and other direct payments to individuals.

With the acquisition of a federal prime contract data base, the Northeast-Midwest Institute is beginning a project to analyze Washington's procurement practices and to inform policymakers how federal contracts can be more evenly distributed throughout the country. This project is supported by a grant from the Ameritech Foundation.

The following tables analyze 1989 prime contracts by agency, state and region. Not included is the Environmental Protection Agency, which has not yet provided procurement data. The information reflects the contract's place of performance rather than the location of the prime contractor.
